- Improve productivity

Improve Productivity

- Streamline processes & secure data access
- Insightful analytics for better decisions
- Prevent data downtime

Reduce costs and simplified IT

- Streamline IT management processes
- Cut upgrade & maintenance costs
- Boost operational efficiency with automation

Make an informed choice: Dynamics NAV vs. Dynamics 365 BC

	Dynamics NAV on-premises	Dynamics 365 Business Central
Functionality	Dynamics NAV on-premises capabilities within the finance, operations, stock, CRM, projects, and manufacturing features do not provide out-of-the-box integration with Microsoft 365, Teams, or Power Platform.	Business Central is a comprehensive solution spanning finance, operations, inventory, sales, service, manufacturing, and projects. Embedded capabilities across Microsoft 365 applications, including Outlook, Teams, and Power Platform to increase user productivity and improve customer experiences.
Remote Access	Desktop and web client is only available when on-premises. Additional work is required to provide access externally.	Desktop and mobile applications and web-based interface is available on any device
Artificial Intelligence (AI)	Not available.	Business Central brings the power of AI to small and medium-sized businesses with features that help you work smarter, adapt faster, and perform better. Built-in AI features help you accelerate automation of repetitive tasks, improve customer service, anticipate business challenges, and enhance decision making.
Upgrades	While some versions of Dynamics NAV are still covered by extended support – which provides limited product enhancements and bug fixes – the upgrade path is to move to Dynamics 365 Business Central. You can find out if your existing version is still covered by extended support here.	Industry-leading product roadmaps. Microsoft releases two major updates to Business Central in April and October each year, plus monthly minor releases. These updates include new capabilities, performance, platform, and security improvements. Reduce upgrade expenses. All releases are automatically updated; however, the customer can schedule the time when the update should take place.
User Interface (UI)	Dynamics NAV on-premises solutions have an older interface and user experience.	Business Central has a modern user interface, including personalized dashboards, built-in reports, clear navigation, and a natural language search option. It's also available through the web and mobile devices.
Power Platform Integration	Requires manual integration.	Easily develop custom line of business applications with seamless integration to Business Central data. Build once and deploy apps in one click across iOS, Android, Windows, and Web.
Connectivity	Dynamics NAV is predominantly an on-premises solution with limited connectivity.	Built on the common data service and easily integrated with hundreds of out-of-the-box solutions available on AppSource. API connectivity available to support HR/Payroll and other integrations with non-Microsoft products.
Reporting	Standard reporting tools such as Excel integration, queries, smart Lists, and management reporter.	Extensive intelligent insights and reporting capabilities with embedded Power BI reports, plus full Excel integration.
